

Granular Soil Amendment or Conditioner

A Natural-Occurring Texas Mineral

SOIL-LIFE IS NOT A FERTILIZER – Soil-Life promotes root and plant development by rendering the soil more favorable to growth. Soil-Life mulches, conditions and aerates the soil. Soil-Life remains in the soil indefinitely. It will not blow away, break down or dissolve. Soil-Life can be used for:

- ★ **Golf Courses** – Building and top dressing greens and tees.
- ★ **Nurseries and Greenhouses** – Planting seeds, bulbs and cuttings of flowers, shrubs and trees.
- ★ **Homes** – Planting and growing lawns, flowers, shrubs and trees.
- ★ **Athletic Fields** – Constructing, rebuilding and maintaining turf and absorbing surplus moisture.

SOIL-LIFE SOIL AMENDMENT OR CONDITIONER

- ★ Increases moisture absorption, absorbs its weight in water.
- ★ Retains moisture for plant use.
- ★ Improves soil-air-oxygen exchange.
- ★ Reduces compaction of soil.
- ★ Keeps soil loose and friable.
- ★ Accelerates drainage of water.
- ★ Promotes deep rooting.
- ★ Prevents “burn-out” of plants in dry weather.
- ★ Is sterile and weed-seed free.
